PROFESSIONAL SUMMARY

CS graduate with hands-on experience in AWS, Docker, Linux, and Bash scripting. Built and deployed a Dockerized monitoring stack (Prometheus, Grafana, Node Exporter), managed cloud infrastructure on AWS, compiled custom Android ROMs, and automated system tasks with modular Bash scripts. Familiar with CI/CD concepts, Git workflows, and Linux server administration. Seeking a DevOps or Cloud internship to apply and expand these skills in a real-world environment.

SKILLS

Cloud & DevOps:	AWS, Docker, Prometheus, Grafana, Git, GitHub, Linux, Bash Scripting, SSH, Server Management
Languages:	Java, Python, JavaScript, C++ (basic)
Backend & DB:	Spring Boot, JWT, Spring Security, MySQL, REST APIs
Frontend:	HTML, CSS, ReactJS, Bootstrap, Tailwind CSS
Other:	Raspberry Pi, GSM/GPS Modules, Android ROM Development (AOSP)
Soft Skills:	Communication, Teamwork, Critical Thinking, Adaptability, Attention to Detail

EDUCATION

B.Tech in Computer Science Engineering	Lourdes Matha College of Science and Technology	2021	2025 CGPA: 7.0
---	---	------	------------------

INTERNSHIP

Full-Stack Java Development	Kompetenzen Technologies	Feb 2026
" Built a role-based CRM backend using Spring Boot with JWT, Spring Security, and MySQL; implemented login, session management, and CRUD endpoints consumed by a React frontend.		
" Gained experience with Git branching, code reviews, and Linux server deployment.		

PROJECTS

Dockerized Monitoring Stack (Prometheus + Grafana)	May 2026
" Built a Dockerized monitoring stack (Prometheus, Grafana, Node Exporter) with a GitHub Actions CI/CD pipeline that automatically validates config and health-checks all services on every push	
" Configured Prometheus to scrape real-time system metrics (CPU, RAM, disk, network) from Node Exporter; visualised live data via Grafana dashboard (Node Exporter Full ID 1860).	
Android ROM Development on AWS	May 2024
" Compiled and customised an Android ROM by modifying AOSP source code, integrating features from LineageOS and Pixel Experience using Linux, Git, and Fastboot on AWS.	
" Conducted debugging and performance tuning; documented the process with user-friendly installation guides.	
Self-Hosted Search Engine (Docker)	Oct 2023
" Deployed a privacy-focused self-hosted search engine using Docker; configured the server for security, performance, and a customised user experience.	
Hyprrland Linux Automation & Dotfiles	Apr 2026
" Wrote modular Bash scripts for wallpaper switching, screen recording, and a fully reproducible cross-machine install; published on GitHub with complete documentation.	
Smart Wearable Device for Alzheimer's Patients	Apr 2025
" Developed an intelligent wearable with GPS tracking, facial recognition, geofencing, medication reminders, and emergency alerts using Raspberry Pi, Python, and GSM modules.	
" Integrated a voice assistant and caregiver notification system; collaborated with healthcare professionals to ensure real-world usability and patient safety.	
CRM Customer Relationship Management App	Feb 2026
" Built a full-stack CRM with React.js, Tailwind CSS, Spring Boot, and MySQL featuring secure admin authentication, real-time dashboard, and full CRUD with search and filter.	
Dynamic Weather Forecasting Web App	Oct 2025
" Built a responsive weather platform using React.js, Tailwind CSS, and OpenWeatherMap API with an interactive world map, real-time metrics, city search, and light/dark mode toggle.
